

Bhagawat Chapagain:

Slide 1: Introduction

Good day, everyone. Thank you for joining us. We are Team 17, and today we're excited to present our project for CS/SSW 555, a lie detection application designed for both professional and personal use. Our goal is to enhance truth verification processes through innovative technology.

Next Few Slides: Team Introduction

Slide 2: Project Background and Motivation

Our project, selected as Option 3, aims to address the need for reliable lie detection by training our models. In a world where the truth is increasingly valuable, our application promises to offer a new level of assurance in various interactions, ensuring authenticity and trust.

Slide 3: Technology Stack and Design

To bring our vision to life, we are utilizing a robust technology stack. For data preprocessing, we use MatLab, while the user interface is designed using PyQt5. Our machine learning models run on Kaggle, and MongoDB serves as our database. Here's a diagram illustrating how these technologies integrate to process and analyze data effectively.

Slide 4: Core Functionality

At the core of our application are some critical functionalities. The program analyzes voice stress, response timings and scans patterns to detect lies. Despite the program being complex, it is easy to use.

Octavio Morales:

Slide 5: MVP Demo

Describe the demo

Slide 6: Achievements and Progress

To date, we've successfully completed multiple development sprints. Our machine learning model has been integrated and is now capable of analyzing and interpreting data with increasing accuracy. This slide shows our sprint timeline and the milestones we've achieved along the way.

Slide 7: Challenges and Solutions

Like any ambitious project, we've encountered our share of challenges, particularly in ensuring robust database connections. We overcame this by optimizing our backend infrastructure, which added a few days to our timeline but significantly improved performance.

Bhagawat Chapagain:

Slide 8: Future Directions

Looking ahead, we plan to enhance our program's capabilities by expanding the data it can analyze and improving the user interface for an even more intuitive experience. Our next steps involve rigorous testing and user feedback sessions to refine our model further, as to improve the 51% accuracy.

Slide 9: Closing Remarks and Q&A

Idk man, think of something creative or something to close. We're now open to any questions you may have—thank you for your attention and interest in our project.
