Project Description:

Our web application is designed to be an interactive cooking community platform named "CulinaryHub". It aims to connect everyone in the world of cooking, allowing them to share recipes, tips, and culinary techniques. The platform will offer a personalized experience based on dietary preferences and cooking skills, encouraging users to explore and contribute to a vast repository of culinary knowledge.

Project (Core) Features:

- Recipe Curation: Users can bookmark their favorite recipes and manage a personal collection.
- Advanced Search: Filters to search recipes by cooking time, skill level, and user ratings.
- Interactive Ingredient Checker: Users can input ingredients they have, and the system suggests possible recipes.
- User Profiles: Enhanced user profiles where users can follow each other, view cooking badges, and achievements.
- Recipe Versioning: Allow users to fork and version recipes, creating variations on classic dishes.

Extra Features (If There is Spare Time):

- Interactive Cooking Guide: Step-by-step cooking mode with timers.
- Social Sharing: Integration with social media to share recipes and cooking experiences.
- Ingredient Inventory: Allow users to keep track of their pantry items and suggest recipes based on available ingredients.
- Meal Planner: A tool to plan meals for the week, with automated grocery lists based on the recipes chosen.
